

Slightly Hidden \$7DollarSecrets Script Testing Secret

Test your \$7 scripts without using a dime of your own money or bugging your friends.

“What are you talking about?”

Just in case you never heard of [\\$7dollarsecrets](#), you should and here's why...

This very handy set of scripts totally automates the process of selling digital products, such as e-books. Once set up, all that's left is sending traffic to the sales page. It works for you 24/7, pretty much hands off. The only part you may need to attend to is providing support here and there.

That's not where it ends actually, it does much more. Can you believe it? The other main purpose of the script set is for build your mailing list. Part of the \$7dollarsecrets scripts process is a Squeeze page for gathering leads for your mailing list. It is set up so the customer needs to give their name and e-mail so they can get their product.

There is one more feature that makes it even better. It just keeps getting better doesn't it? The same scripts are set up to be used as an affiliate program. Yep, you can use it to have other people (many others is you want), sell your product for you night and day.

Now, there is one slight twist to the affiliate option that is not for every marketer. Usually the script is set up to give the affiliate 100%, which is normally \$7, hence the name of the product. There is a bigger picture here you have to understand. Since the script is set up to gather leads for your mailing list, you could have many people helping **to build YOUR list**.

Sure you might be giving away 100% of the profits, but in reality you are gaining a paying customer for your list. As you might know, the best lead you can have is one that has been proven to buy.

One more ingenious part of the system, yes there is more, is that the script can also do an OTO, or One Time Offer. As with the affiliate program you can also give affiliates 50% of the OTO offer.

Best of all is the cost. If you haven't guessed it yet, the script set only costs \$7, about the price of a fast food drive-by.

There is no other system or script that matches the features of the \$7DollarSecrets for the price, none.

So....

Seems there is a little know secret for owners of the \$7 Secrets Script, I know I had to do some searching to learn it myself.

The reason I wrote this short report is that this helpful “secret” is not covered in the documentation for the script or the installation document. At least not in the current version I have.

Don't get me wrong, the script itself is outstanding, it really was an Internet Marketing Revolution, and for the price it can NOT be beat. With that said, I personally do not expect a 100 page installation or usage manual.

This is NOT a dig on the owners, new owners or creator.

Just some information not well documented.

Enough gabbing, on with the show....

When I first started messing with the \$7 secrets script, it was a little intimidating. One was getting it up and running, which really wasn't that difficult in the end.

While getting everything set-up though, something kept nagging me, how the heck am I going to test it?

Seems I'd have to bug a friend to try it out and refund his purchase. Next question was what if my set-up didn't work right the first time. My friend might be stuck “trying” it over and over. What if I didn't have a friend? Then what?

Now, I knew PayPal had a test environment. (Light bulb moment)

A little searching on the forum and sure enough, I had found the secret.

Okay, Okay, it wasn't really a secret, just wasn't really out in the open.

Get on with it already...

The Big, Slightly Hidden Secret

Using Paypal's Sandbox. Yep that's it.

The Sandbox is a testing environment you can use to test any script that uses PayPal as its payment processor.

It's pretty easy to use.

Go to <https://developer.paypal.com/>

You will need to sign-up for two accounts, one as a buyer and one as a seller. You need two accounts because PayPal won't let you buy from yourself, makes sense.

With these two accounts it's just like having two real accounts without spending any money.

Once you have the test accounts, you just need to change your scripts call to the payment system.

Naturally I don't know your scripts so I can't say exactly where to make the changes. For the most part, you usually change any references to paypal.com, such as the following:

Change www.paypal.com to www.sandbox.paypal.com

I'll get to specifics for the \$7 dollar scripts in just a second, as I need to first say a word of caution, or better yet, a big reminder...

You have to **remember and make note of where you change your scripts**, so that **you remember to change them back**. After all, you're not going to make too many sales in test mode 😊

Now, let's talk specifics for the \$7 dollar scripts....

First and most important, the following is specific for the version I currently use which is V2.7. If you're not using the same version, your changes could be slightly different.

Before you even think about changing any of your files, make sure to back them up or make copies and put them somewhere safe.

You can't hold me responsible because you didn't make backups.

There are three files you need to change within the \$7 dollar scripts, they are:

index.php
ipn.php
settings.php

For **index.php**, around line 654

Change www.paypal.com to www.sandbox.paypal.com

DO NOT CHANGE ANYTHING ELSE!

For **ipn.php**, around line 21

Change www.paypal.com to www.sandbox.paypal.com

Again, DO NOT CHANGE ANYTHING ELSE!

Last but not least,

For **settings.php**, around line 10

```
$sys_default_email = "yourpaypaladdress@email.com";
```

You need to change your PayPal e-mail address to the test e-mail address the PayPal sandbox gives you. Remember, you need two and use the "seller" one for this change. Then when you test, you use the buyer one when going to the PayPal system.

That's all there is to it. Test to your hearts content. It's nice to know everything is working correctly without bugging a friend for half the day.

I am going to be a pain in the butt and remind you again, when you're going live with your scripts, don't forget to change the code back to what it was!

So, now you have no excuses for not taking advantage of the scripts!

Don't have your own copy? Why not? Do you want to be left behind, or miss out on making a nice little automatic income? Well, you better go get your own [\\$7DollarSecrets](#) and start making some money!

I really hope you've found this useful. If so let me know, I'd love to hear from you.

You can leave a message at my support desk
